

Practical Problem Index

1. Create class employee with getdata() and putdata() function.
2. Create class account with acc_no and balance member and calculate simple Interest using class and object.
3. Create class student with rno, name and marks of five subjects. Display result of student including percentage and class(dist, first, second, pass, fail).
4. Develop a clsString having following functionality
 - Delete all vowels from string
 - Delete specific word from string
 - Count number of words
 - Convert Uppercase to lowercase
 - Check the string wheather it is Palindrome or not
5. Develop a class for Person and inherit a class student.
6. Write a program to create class A with data member no1, class B with data member no2 and class C with member functions Add, Subtract, multiply and divide.
7. Write a program to create class Person with data members (Name, Age). Create a class Employee inherited from person with data members (eid, salary). Create a class Programmer inherited with no-of-lang known. Show the detail of programmer.
8. In a bank, some customers have savings account and some customers may have taken a loan from the bank. So bank always maintains information about bank depositors and borrowers. Design a Base class Customer (cid, name, phone-number). Derive a class Depositor(accno, balance) from Customer. Again, derive a class Borrower (loan-no, loan-amt) from Depositor.
9. Write necessary member functions to read and display the details of 'n' customers.
10. Create a base class Student with id, name and void getStu() function. Derive class Marks from student with mark1, mark2, mark3 and void getMarks() function. Create a class Sports with spmarks and void getSPMarks() function. Derive class result from Marks and Sports with avg, total and show result function.
11. Write a program to add two given numbers(int, int)(int, float)(float, float) using function overloading.
12. Create a class shape with area function. Derive rectangle, square and circle classes from shape class. Override area function of shape in its derived class.
13. C++ program to overload the binary operator + to add two complex numbers
14. Create two classes, A with private data member v1 and B with private data member v2. Increment the value of v1&v2 by 10 using friend function. Use other member function of your choice.
15. Write a program to implement Stack operations.
16. Write a program to convert infix to Postfix.
17. Write a program to convert infix to Prefix.
18. Write a program to implement Simple Queue operations.
19. Write a program to implement Circular Queue operations.
20. Write a program to implement Double Ended Queue operations.
